SUMMARY

I am a motivated and technically skilled individual with experience in Django-based web development, seeking to contribute to Infocare's Service Delivery Platform project. I have hands-on experience building web applications, implementing authentication systems, and working with APIs. Alongside my technical skills, I possess strong communication and coordination abilities, allowing me to effectively explain technical concepts to non-technical stakeholders. I am eager to support municipalities in improving digital service delivery while gaining practical field experience and contributing to meaningful public-sector transformation.

EDUCATION

NIST College, Banepa (Banepa)

Bsc.CSIT
Feb, 2023 - Present

I am currently pursuing a BSc.CSIT at NIST College, Banepa since February 2023. My coursework focuses on computer science, software development, and information technology, providing me with strong foundational knowledge in programming, databases, and application development. I am actively applying these skills in academic projects and personal projects, enhancing my practical experience while completing my degree.

PROJECTS

Let Me Cook

- Developed a web-based platform using django framework that helps users discover recipes based on random available ingredients. Integrated backend logic to process user input and provide relevant suggestions. Focused on user-friendly interaction and real-time response handling.

<https://github.com/prabesh313/Let-me-cook>

SafeHood

- Built a platform using django framework aimed at improving community safety by allowing users to report incidents and receive updates through email notification. Designed features for communication, reporting, and basic data management, demonstrating the use of technology for public service and local community support.

<https://github.com/prabesh313/SafeHood>

Chatapp

- Developed a web-based chat application that enables real-time communication between users. Implemented features such as message sending, dynamic updates, and user interaction using Django and JavaScript. Focused on creating a smooth and responsive user experience along with efficient backend handling of messages.

Achievements

- Successfully developed multiple web applications including SafeHood and Let Me Cook
- Implemented authentication systems with Google OAuth integration
- Built real-world projects focused on user interaction and public service solutions
- Developed practical solutions addressing community and user needs through web applications
- Improved problem-solving and technical skills through continuous project development

Skills

Problem solving, Python Programming, Django framework, REST API Concepts, User authentication, Database design and management (SQLite / MySQL), Communication skills, Presentation & Demonstration, Coordination & Teamwork, Time management

Language

HTML,CSS, Javascript, Python, JAVA, C,C++
